Raw

Download and install the MagicMirror installer for your operating system:

1. Windows: [MagicMirror_1.0.0_windows_x86_64.exe](#)
2. macOS: [MagicMirror_1.0.0_macos_universal.dmg](#)
3. Other: [Go to Release](#)

Download Models

When you first launch the app, it will automatically download the required model files.

If the download progress is stuck at 0% or stops midway, follow these steps for manual setup:

Download Model Files

Choose the model file that matches your operating system:

- [server_windows_x86_64.zip](#) (Windows, most common)
- [server_windows_aarch64.zip](#) (Windows, for ARM64 devices)
- [server_macos_aarch64.zip](#) (macOS, Apple Silicon, such as M1, M4 chips)

- [server_macos_x86_64.zip](#) (macOS, Intel chips)

Extract the Downloaded File

You'll get a folder—rename it to `MagicMirror` . Move this folder to your computer's `HOME` directory, for example:

Restart MagicMirror, and it should now work properly.

Launch APP

After downloading the model files, the first launch may take some time.

The app should launch within 3 minutes. If it takes longer than 10 minutes to start, please refer to the [FAQ](#)

Need help?

Most issues are addressed in the [FAQ](#). If you need further assistance, please [submit an issue](#).
