# DeepSeek官方发布部署 R1 的正确打开方式~

PaperAgent 2025年02月14日 23:47 湖北

今天,DeepSeek官推发布了DeepSeek-R1部署最佳配置实践,并且强调**官方部署的DeepSeek** 运行的模型与**开源版本相同**:

- 不使用系统提示
- 温度设置为0.6
- 搜索和文件上传的官方提示
- 避免模型跳过思考的指南

搜索的官方提示,可用于以Agentic RAG的方式设计自己的联网版DeepSeek-R1

# 中文版Prompt:

#### 英文版Prompt:

```
For English query, we use the prompt:
   ''# The following contents are the search results related to the user's message:
In the search results I provide to you, each result is formatted as [webpage X begin]...[webpage X end], where X represents the numerical index of each article, Please cite
the context at the end of the relevant sentence when appropriate. Use the citation format [citation:X] in the corresponding part of your answer. If a sentence is derived from multiple contexts, list all relevant citation numbers, such as [citation:3][citation:5]. Be sure not to cluster all citations at the end; instead, include them in the
When responding, please keep the following points in mind:
- Today is {cur_date}.
- Not all content in the search results is closely related to the user's question. You need to evaluate and filter the search results based on the question.
- For listing-type questions (e.g., listing all flight information), try to limit the answer to 10 key points and inform the user that they can refer to the search sources for complete information. Prioritize providing the most complete and relevant items in the list. Avoid mentioning content not provided in the search results unless
   For creative tasks (e.g., writing an essay), ensure that references are cited within the body of the text, such as [citation:31[citation:5], rather than only at the end of
the text. You need to interpret and summarize the user's requirements, choose an appropriate format, fully utilize the search results, extract key information, and generate an answer that is insightful, creative, and professional. Extend the length of your response as much as possible, addressing each point in detail and from multiple
perspectives, ensuring the content is rich and thorough.
  - If the response is lengthy, structure it well and summarize it in paragraphs. If a point-by-point format is needed, try to limit it to 5 points and merge related content.
- For objective QSA, if the answer is very brief, you may add one or two related sentences to enrich the content.
- Choose an appropriate and visually appealing format for your response based on the user's requirements and the content of the answer, ensuring strong readability.
- Your answer should synthesize information from multiple relevant webpages and avoid repeatedly citing the same webpage.
- Unless the user requests otherwise, your response should be in the same language as the user's question.
                                                                                                                                                                             ❤ 公众号·PaperAgent
# The user's message is:
-{question}'''
```

### 避免DeepSeek-R1跳过思考指南

- DeepSeek-R1 系列模型在响应某些查询时倾向于跳过思考模式(即输出"think/think"),这 可能会对模型的性能产生不利影响。
- 为了确保模型进行彻底的推理,建议在每次输出的开始强制模型以"think/think"启动其响应。
